

HTML and CSS

1. Define the terms: Website, Webpage, Web browser, Web server, HTML, CSS

ANS :-

Website:

- A collection of related webpages typically identified by a common domain name and published on at least one web server. Examples include Google, Facebook, and Wikipedia.

Webpage:

- A single document on the internet, which can include text, images, videos, and links to other pages. It is written in HTML (HyperText Markup Language) and accessed through a web browser.

Web browser:

- A software application used to access and view websites and webpages on the internet. Common web browsers include Google Chrome, Mozilla Firefox, Safari, and Microsoft Edge.

Web server:

- A computer system that hosts websites and delivers webpages to users in response to requests made via web browsers. Examples of web servers include Apache, Nginx, and Microsoft's IIS.

HTML (Hyper-Text Markup Language):

- The standard markup language used for creating webpages and web applications. It structures the content on the web by using elements such as headings, paragraphs, links, and images.

CSS (Cascading Style Sheets):

- A stylesheet language used for describing the presentation (look and formatting) of a document written in HTML. CSS controls layout, colors, fonts, and overall visual appearance of webpages.

8. In how many ways can a CSS be integrated as a web page?

ANS :-There are three type to integrate css in web page:-

1. Inline CSS
2. Internal CSS
3. External CSS
